

DIGITAL FILM PRODUCTION

BACHELOR DEGREE COURSE

DIGITAL FILM MAKING

Film Production covers all necessary aspects of computer-based video production and camera techniques. It presents students with a complete and far-reaching education. The course content and structure encourage students to learn the theoretical background to the topics covered and to apply this, creatively, to the production process. Individual practical time and experimentation is an essential component of the course.

The degree broadens the learning experience beyond the purely vocational type training, by including a wider knowledge base and research-based educational experience. This degree is taught and administered by SAE Indonesia and validated by Middlesex University, London.
